

Welcome to the World of Search  
Vizier Finder™ for document searches.

**Not sure what documents you need? Not sure of the exact spelling of the file name or key word? Not sure where your file is stored on the network?**

**Employees performing ineffective searches and wasting time looking for information can cost companies up to 10% in salary expenses.** It is not just low level employees either, 59% of middle managers miss important information almost every day because it exists within the company but they cannot find it.

**Vizier Finder™ is an intelligent, user-friendly tool that allows you to find documents in any drive on your network instantly.** It searches your databases too.

**Don't worry about spelling or data entry errors.** Vizier Finder™ finds relevant documents and database records with inexact or incorrect search criteria. Vizier sorts the search results in order of relevance and displays the document content so you don't have to leave the screen. Clicking on the line item in the grid opens the source document.

# Vizier Finder™ Overview

- Quick response time.
- Finds relevant documents and database records with inexact and/or incorrect search criteria.
- Searches comments and descriptions.
- Intuitive interface that is so easy to use, no specialized technical knowledge is required by the user.
- Vizier™ is fully operational with SQL Server, Oracle and MS Access databases

# Find your document in any drive or directory on the network in seconds

Apple Unveils Internet Strategy  
iTools - A Revolutionary New Category of Internet Services  
KidSafe - Finally a Way to Protect Our Kids on the Internet

MACWORLD EXPO, SAN FRANCISCO-January 5, 2000-  
Apple® today took the wraps off its highly anticipated  
Internet strategy, introducing a new category of Internet  
services called iTools; a completely redesigned Apple.com  
web site featuring iReview and iCards; and a multi-year  
partnership and investment with Earthlink for Internet access  
(see related release).

iTools is a revolutionary new category of Internet services  
that takes advantage of Apple's unique technology on both  
ends of the Internet—the operating system on the client side  
(Mac® OS 9) and the services software running on Apple's  
Internet servers (iTools). Providing the software on both ends  
of the Internet offers Apple the unprecedented ability to offer  
services impossible to implement solely on Internet servers.

"Our new iReviews, iCards and the revolutionary iTools offer  
amazing new ways for Mac users to take full advantage of the  
Internet," said Steve Jobs, Apple's iCEO. "Mac users can  
now do things on the Internet that Wintel users can only  
dream of."

iTools is free to Macintosh® users running the Mac OS 9  
operating system, and can be accessed at Apple.com using  
any Internet connection. Apple's first four iTools premiere  
today:

KidSafe, a breakthrough way to protect our kids on the  
Internet. KidSafe specifies what kids can see, rather than  
trying to filter out what they shouldn't see. KidSafe downloads  
a software module into the computer's operating system, which  
then verifies that each requested web destination is KidSafe by  
checking with Apple's KidSafe server. Apple's server

# Search Results

**Green:** all search terms are in the file.

**Blue:** one or more of the search terms are in the file.

**White:** no terms were found.

The screenshot shows the Vizion™ Finder interface with search results for the query 'apple internet'. The search space is 'Desktop' and the search type is 'Standard'. The search results are displayed in a table with columns for file name, date, and status. The status column indicates whether all search terms are present (Green), one or more terms are present (Blue), or no terms were found (White). A red circle highlights the search results table, and a red arrow points from the legend to the search results.

Select the **Search Type** to reduce your search space and speed up the search:

- Turbo restricts the search space and is lightening fast.
- Standard broadens the search field and searches more characters.
- Full searches all characters in all the documents in the search file.

Not sure of the exact spelling of the file name or key word?

Did you make a data entry error?

No problem!

Just set your search criteria to W-Inexact (word inexact) or P-Inexact.

The Vizier fuzzy search will find the correct document!

The screenshot shows the Vizier™ Finder (Ver. 9.0.10275.1530) Enterprise interface. The search space is set to Desktop, and the search type is Turbo. The search file is THANOS Business. The search criteria are set to W-Inexact for Content with the keyword 'apepl itneren'. The search results table shows several files, with the first three highlighted in green. The text preview on the right shows a document about Apple's Internet services.
